The easy way to replace the inner door skin membrane.

- One single length
- Grid printed release liner
- Dispensing box

BENEFITS

- Easy to fit and use
- Sound deadening properties reduce road noise
- Easy cut with grid printed release liner

Door Skin Replacement Foam

HOW TO USE THIS PRODUCT:

1. Pull out enough material out of the dispensing box. Lay on a flat surface with the paper grid side face up. If possible lay the old door skin film over the top.

2. Trace around the old skin with a marker. If no door skin film is available, place the skin against the door and trace around whilst on the car door itself.

3. Remove the old liner and you should be left with a guideline to the desired shape.

4. Cut the film following the trace lines.

5. Once you have finished cutting the shape out, you are now ready to fit to the car. Peel off the release liner to expose the adhesive. Position this on the door taking care to ensure it is in the correct position. Press it firmly in place.

6. Replace the inner door panel and fix all the interior parts back onto the car.
