

ALLOY WHEEL REPAIR MASK

Product Description

A flexible solution for the masking of tyres during the re-spraying of wheel alloys and commercial vehicle rims.

Features

A flexible solution for the masking of tyres during the re-spraying of wheel alloys and commercial vehicle rims.

- Elastic centre piece
- Temperature resistant
- Maximum inner diameter: 26"

Benefits

- Paint absorbent
- Flexible for all sizes of wheel rims
- Saves time & material compared to traditional processes
- Simple & easy to use

Part Number	Size	Units
1095.2617	170cm x 170cm	20

How to use this product

1 Remove wheel from the vehicle & deflate the tyre.

2 Before masking the wheel, clean the inner rim ensuring it's free from dirt and grease.

3 Apply the product by placing the elasticated band around the rim, ensuring the treated side of the film is facing upwards.

4 When you have positioned the product into place, carefully flip the wheel over so the alloy is facing the ground, draw the corners of the product together & tape down.

5 Once the product is taut, ensure the film is firmly in position but not so taut the elasticated band is coming away from the rim.

6 To complete the masking process, flip the wheel over, checking that the elasticated band is still creating a seal and then paint.
